Diagnosis

Neuroblastoma (40)

Abstract

Pediatric solid tumors are rare compared to adult solid tumors. Rhabdomyosarcomas have features of skeletal muscle cells in the sympathoadrenal lineage. Research that can improve patient outcomes is needed. We have collaborated with Aviv Regev for pediatric solid tumors. Our data show the tumor microenvironment using single-cell or single-nuclei RNA-seq. Over the past 9 years, we have generated a large number of pediatric cancer models including O-PDXs and corresponding single-cell or single-nuclei RNA-seq. The O-PDXs and corresponding single-cell or single-nuclei RNA-seq data provide a fundamental gap in our knowledge of the tumor microenvironment. We would greatly appreciate if you cite our work.
